R-22:

1. $T = 52^\circ\text{F} (11^\circ\text{C})$
2. $P = 68 \text{ psig (4.7 bar g)} \rightarrow T_p = 40^\circ\text{F} (4^\circ\text{C})$
3. $T - T_p = T_{SH}$
 $52^\circ\text{F} (11^\circ\text{C}) - 40^\circ\text{F} (4^\circ\text{C}) = 12^\circ\text{F} (7^\circ\text{C})$

Turn adjustment clockwise to increase superheat, counterclockwise to decrease superheat. To return to approximate original factory setting, turn adjustment stem counterclockwise until the spring is completely unloaded (reaches stop or starts to "ratchet"). Then, turn it back in one half of the "Total Turns" shown on the chart.
